Literate Data Model

BLANK

Preliminaries

the basic structure of the model

In Literate Data Modeling, the main components of interest are typically Classes, Attributes, Models, and Subjects. However, to streamline the model and promote reusability, we introduce a supertype called Component. By defining common attributes and behaviors in the Component class, we can inherit them in the subclasses, ensuring consistency and reducing duplication throughout the model.

We present the Component class first because it is a best practice in modeling to introduce supertypes before their subtypes. This approach allows readers to understand the general concepts and shared properties before delving into the specifics of each specialized component.

Component
An element or building block of the literate data model

PLURAL Components
UMEDPLURAL Components
PENDENTS Annotation
SUBTYPES LiterateDataModel , Subject , Class , Key , AttributeSection , Attribute , Constraint , Method , ParameterAnInputToAMethod

Name the name of the component, not in camel case
(String value O_O)

warning This is a warning with emoji

name The name of the component
(CamelName value O_O)

Name *(QualifiedCamel value O_O)*

Name a short form of the component's name, used for cross references and improved readability.
(CamelName value O_O)

example "LDM" is the short form of "Literate Data Model".

DEFAULT name - how do you say name in english?
OCL x.name == y

STRAINTS the abbreviated name should be shorter than the actual name
OCL len(abbreviatedName) < len(name)
MESSAGE Why have an abbreviation longer than the name?
SEVERITY Warning

note Does this annotation find it's way to the Constraint? YES! It's fixed!

eLiner A brief, one-line definition or description of the component, suitable for use in a descriptive table of contents. _
(OneLiner value O_O)

ration A more detailed explanation or discussion of the component _
(RichText value O_O)

nment Indicates whether this component is an embellishment added during post-parsing processing _
(Boolean value O_O)

DEFAULT false

note This attribute is set to true for components that are automatically generated or added during the fleshing out, review, or rendering processes, such as implied attributes or suggested model elements. It helps distinguish embellishments from the core model elements defined in the original LDM source.

ent Indicates whether this component is an embellishment added during post-parsing processing _ *(**Boolean** value O_O)*

EFAULT false

note This attribute is set to true for components that are automatically generated or added during the fleshing out, review, or rendering processes, such as implied attributes or suggested model elements. It helps distinguish embellishments from the core model elements defined in the original LDM source.

ent Indicates whether this component is an embellishment added during post-parsing processing _ *(**Boolean** value O_O)*

EFAULT false

note This attribute is set to true for components that are automatically generated or added during the fleshing out, review, or rendering processes, such as implied attributes or suggested model elements. Classes

Class
A key entity or object type in the model, often corresponding to a real-world concept

LURAL Classes
DENTS Subtyping , Key , AttributeSection , ClassConstraint
YPEOF Component
TYPES ReferenceType
RAINTS Within each Class, attribute names must be unique.

rm the normal English plural form of the name of the Class
(UpperCamel value O_O)

Might be Books for the Book class or other regular plurals.

- But also might be People for Person.

note When inputting a model, you will rarely need to specify the plural form. The input program will just look it up.

EFAULT the regular plural, formed by adding "s" or "es".

On the Class or Classes on which this class is dependent
(Set of Class value O_O)

This is solely based on **Existence Dependency** . A true dependent entity cannot logically exist without the related parent entity. For instance, an Order Item cannot exist without an Order. If removing the parent entity logically implies removing the dependent entity, then it is a dependent entity.

note that basedOn and dependentOf are being used synonymousle in this metamodel.

VERSE Class.inverseOfBasedOn

es The parent class
(Es value O_O)

gs the criteria, or dimensions, by which the class can be divided into subtypes
(List of Subtypings value O_O)

ample in a library model, the `Book` class could have subtypings based on genre (e.g., Fiction, Non-fiction), format (e.g., Hardcover, Paperback), or subject (e.g., Science, History).

VERSE Subtyping.inverseOfSubtypings

es Any subtypes or specializations of this class based on it's subtypings.
(List of Classes value O_O)

example For instance, using the `Book` example, the subtypes could include `FictionBook` , `Non-fictionBook` , `HardcoverBook` , `PaperbackBook` , `ScienceBook` , and `HistoryBook` .
