

FIRST PAGE LEFT LEFT BLANK

## Literate Data Model

<b>Component</b>	
An element or building block of the literate data model	
<b>PLURAL</b>	Components
<b>DEPENDENTS</b>	<a href="#">Annotation</a>
<b>TYPES</b>	<a href="#">LiterateDataModel</a> , <a href="#">Subject</a> , <a href="#">Class</a> , <a href="#">Key</a> , <a href="#">AttributeSection</a> , <a href="#">Attribute</a> , <a href="#">Constraint</a> , <a href="#">Method</a> , <a href="#">ParameterAnInputToAMethod</a>
<b>name</b>	the name of the component, not in camel case ( <a href="#">String</a> value O_O )
<b>warning</b>	This is a warning with emoji
<b>me</b>	The name of the component ( <a href="#">CamelName</a> value O_O )
<b>me</b>	( <a href="#">QualifiedCamel</a> value O_O )
<b>me</b>	a short form of the component's name, used for cross references and improved readability. ( <a href="#">CamelName</a> value O_O )
<b>sample</b>	"LDM" is the short form of "Literate Data Model".
<b>DEFAULT</b>	name - how do you say name in english?
<b>OCL</b>	x.name == y
<b>RAINTS</b>	the abbreviated name should be shorter than the actual name
<b>OCL</b>	len(abbreviatedName) < len(name)
<b>MESSAGE</b>	Why have an abbreviation longer than the name?
<b>VERITY</b>	Warning
<b>note</b>	Does this annotation find it's way to the Constraint? YES! It's fixed!
<b>ner</b>	A brief, one-line definition or description of the component, suitable for use in a descriptive table of contents. _ ( <a href="#">OneLiner</a> value O_O )
<b>on</b>	A more detailed explanation or discussion of the component _ ( <a href="#">RichText</a> value O_O )
	mechanical attributes
<b>ent</b>	Indicates whether this component is an embellishment added during post-parsing processing _ ( <a href="#">Boolean</a> value O_O )
<b>DEFAULT</b>	false
<b>note</b>	

This attribute is set to true for components that are automatically generated or added during the fleshing out, review, or rendering processes, such as implied attributes or suggested model elements. It helps distinguish embellishments from the core model elements defined in the original LDM source.

	<b>AnnotationType</b> a kind of note, or aside, used to call attention to additional information about some Component.
note	Each LDM declares a set of Annotation Types, with defined labels, emojis, and clearly documented purposes. These are <i>recognized</i> or <i>registered</i> Annotation Types.
PLURAL	AnnotationTypes
DEPENDSON	<a href="#">LiterateDataModel</a>
emoji	an emoji ( <a href="#">Emoji</a> value O_O )
name	an emoji ( <a href="#">String</a> value O_O )
unicode	the Unicode for the emoji ( <a href="#">String</a> value O_O )
label	A short label to indicate the purpose of the annotation ( <a href="#">LowerCamel</a> value O_O )
plural	the plural form of the label ( <a href="#">UpperCamel</a> value O_O )
DEFAULT	based on label
reason	the intended reason for the annotation. ( <a href="#">OneLiner</a> value O_O )
depends on	A link back to the LiterateDataModel on which this AnnotationType depends. ( <a href="#">LiterateDataModel</a> value M_1 )
inverse attribute	inverse attribute for Annotation.annotationType from which this was implied. ( <a href="#">Annotation</a> value M_1 )
VERSE	<a href="#">Annotation.annotationType</a>
depends on	A link back to the LiterateDataModel on which this AnnotationType depends. ( <a href="#">LiterateDataModel</a> value M_1 )
inverse attribute	inverse attribute for Annotation.annotationType from which this was implied. ( <a href="#">Annotation</a> value M_1 )

INVERSE [Annotation.annotationType](#)

**Annotation**  
A note or comment associated with a model element

PLURAL Annotations

IMPLURAL Annotations

BASED ON [Component](#)

**AnnotationType** (Optional [AnnotationType](#) value O\_O )

**note** An Annotation is considered to *recognized* if the label is associated with an Annotation Type. otherwise it is *ad hoc* .

**note** Should be a Value Type

INVERSE [AnnotationType.inverseOfAnnotationType](#)

**label** A short label to indicate the purpose of the annotation \_ ( [CamelName](#) value O\_O )

But any short label is valid.

DEFAULT from annotationType

**emoji** (Optional [Emoji](#) value O\_O )

DEFAULT from annotation type

**content** The content or body of the annotation ( [RichText](#) value O\_O )

**embellishment** Indicates whether this annotation is an embellishment added during post-parsing processing \_ ( [Boolean](#) value O\_O )

DEFAULT false

**note** This attribute is set to true for annotations that are automatically generated or added during the fleshing out, review, or rendering processes, such as suggestions, issues, or diagnostic messages. It helps distinguish embellishment annotations from the annotations defined in the original LDM source.

**dependsOn** A link back to the Component on which this Annotation depends. ( [Component](#) value M\_1 )

**dependsOn** A link back to the Component on which this Annotation depends. ( [Component](#) value M\_1 )

	<b>LiterateDataModel</b> A representation of a domain's entities, attributes, and relationships, along with explanatory text and examples
LURAL	LiterateDataModels
DENTS	<a href="#">AnnotationType</a> , <a href="#">Subject</a>
YPEOF	<a href="#">Component</a>
me	( <a href="#">UpperCamel</a> value O _ O )
RIDES	<a href="#">Component.name</a>
cts	list of all classes in the model, as ordered in the definition of the model. ( List of <a href="#">Classes</a> value O _ O )
VERSE	<a href="#">Class.inverseOfAllSubjects</a>
ATION	gathering s.allSubjects over s in subjectAreas
RAINTS	Subject names must be unique across the model.
es	list of all classes in the model, as ordered in the definition of the model. ( List of <a href="#">Classes</a> value O _ O )
VERSE	<a href="#">Class.inverseOfAllClasses</a>
ATION	gathering s.allClasses over s in allSubjects.
RAINTS	Class names must be unique across the model.
es	( List of <a href="#">AnnotationTypes</a> value O _ O )
Language	the recommended language for expressing derivation, defaults, and constraints ( <a href="#">CodingLanguage</a> value O _ O )
DEFAULT	OCL
languages	( Optional List of <a href="#">CodingLanguages</a> value O _ O )
TemplateLanguage	the recommended language for expressing derivation, defaults, and constraints ( <a href="#">TemplateLanguage</a> value O _ O )
DEFAULT	Handlebars
TemplateLanguages	( Optional List of <a href="#">TemplateLanguages</a> value O _ O )
ns	A list of functions that require sophisticated AI-powered implementation * ( List of <a href="#">String</a> value O _ O )
ATION	[ <a href="#">aiEnglishPlural()</a> ]

## Subject

A specific topic or theme within the model

Subjects are the chapters an sections of the model.

- A subject need not contain any Classes if it's just expository.

**PLURAL** Subjects  
**BASEDON** [LiterateDataModel](#)  
**BTYPEOF** [Component](#)  
**SUBTYPES** [SubjectArea](#)

**name** ( [UpperCamel](#) value O\_O )

**VERRIDES** [Component.name](#)

**parentSubject** The parent subject, if any, under which this subject is nested \_  
( [Optional Subject](#) value O\_O )

**INVERSE** [Subject.inverseOfParentSubject](#)

**classes** The major classes related to this subject, in the order in which they should be presented \_  
( [List of Classes](#) value O\_O )

**issue** define chapter, section, subsection as levels?

**INVERSE** [Class.inverseOfClasses](#)

**childSubjects** Any child subjects nested under this subject, in the order in which they should be presented \_  
( [List of Subjects](#) value O\_O )

**DSL** : the Classes within a Subject are always displayed before the childSubjects.

**INVERSE** [Subject.inverseOfChildSubjects](#)

**literateDataModel** A link back to the LiterateDataModel on which this Subject depends.  
( [LiterateDataModel](#) value M\_1 )

**parentSubject** Inverse attribute for Subject.parentSubject from which this was implied.  
( [Subject](#) value M\_1 )

**INVERSE** [Subject.parentSubject](#)

**childSubjects** Inverse attribute for Subject.childSubjects from which this was implied.  
( [Subject](#) value M\_1 )

VERSE [Subject.childSubjects](#)

**Model** A link back to the LiterateDataModel on which this Subject depends.  
( [LiterateDataModel](#) value M\_1 )

**Subject** Inverse attribute for Subject.parentSubject from which this was implied.  
( [Subject](#) value M\_1 )

VERSE [Subject.parentSubject](#)

**Subjects** Inverse attribute for Subject.childSubjects from which this was implied.  
( [Subject](#) value M\_1 )

VERSE [Subject.childSubjects](#)

**SubjectArea**

A main topic or area of focus within the model, containing related subjects and classes

WHERE parentSubject is absent

LURAL SubjectAreas

SEDON [LiterateModel](#) , [Xyz](#)

TYPEOF [Subject](#)

**s del** A link back to the LiterateModel on which this SubjectArea depends.  
( [LiterateModel](#) value M\_1 )

**s Xyz** A link back to the Xyz on which this SubjectArea depends.  
( [Xyz](#) value M\_1 )

**s del** A link back to the LiterateModel on which this SubjectArea depends.  
( [LiterateModel](#) value M\_1 )

**s Xyz** A link back to the Xyz on which this SubjectArea depends.  
( [Xyz](#) value M\_1 )

## Class

A key entity or object type in the model, often corresponding to a real-world concept

PLURAL	Classes
DEPENDENTS	<a href="#">Subtyping</a> , <a href="#">Key</a> , <a href="#">AttributeSection</a> , <a href="#">ClassConstraint</a>
BTYPOF	<a href="#">Component</a>
SUBTYPES	<a href="#">ReferenceType</a>
STRAINTS	Within each Class, attribute names must be unique.

**Form** the normal English plural form of the name of the Class

( [UpperCamel](#) value O\_O )

Might be Books for the Book class or other regular plurals.

- But also might be People for Person.

**note** When inputting a model, you will rarely need to specify the plural form. The input program will just look it up.

**DEFAULT** the regular plural, formed by adding "s" or "es".

**basedOn** the Class or Classes on which this class is dependent

( [Set of Class](#) value O\_O )

This is solely based on **Existence Dependency**. A true dependent entity cannot logically exist without the related parent entity. For instance, an Order Item cannot exist without an Order. If removing the parent entity logically implies removing the dependent entity, then it is a dependent entity.

**note** that basedOn and dependentOf are being used synonymously in this metamodel.

**INVERSE** [Class.inverseOfBasedOn](#)

**types** The parent class

( [Es](#) value O\_O )

**typings** the criteria, or dimensions, by which the class can be divided into subtypes

( [List of Subtypings](#) value O\_O )

**example** in a library model, the `Book` class could have subtypings based on genre (e.g., Fiction, Non-fiction), format (e.g., Hardcover, Paperback), or subject (e.g., Science, History).

**INVERSE** [Subtyping.inverseOfSubtypings](#)

**types** Any subtypes or specializations of this class based on its subtypings.

( [List of Classes](#) value O\_O )

example	For instance, using the <code>Book</code> example, the subtypes could include <code>FictionBook</code> , <code>Non-fictionBook</code> , <code>HardcoverBook</code> , <code>PaperbackBook</code> , <code>ScienceBook</code> , and <code>HistoryBook</code> .
VERSE	<a href="#">Class.inverseOfSubtypes</a>
es	<div>The attributes or properties of the class, in the order in which they should be presented _</div> <div>( List of <a href="#">Attributes</a> value O_O )</div>

## Subtyping

a way in which subtypes of a Class may be classified

PLURAL Subtypings

IMMEDIATE PLURAL Subtypings

BASED ON [Class](#)

**name** ( [LowerCamel](#) value 0\_0 )

**exclusive** ( [Boolean](#) value 0\_0 )

DEFAULT true

**exclusive** ( [Boolean](#) value 0\_0 )

DEFAULT true

**classes** ( List of [Classes](#) value 0\_0 )

**DSL** : Shown in the DSL as

- Subtypes: byBrand - Brand1, Brand2,... (non exclusive, exhaustive)
- on the super class. And as
  - Subtype of: SuperClass byBrand
- on the subclass.

**note** every class can have an unnamed subtyping.

INVERSE [Class.inverseOfClasses](#)

**inverseOfClasses**  
**subtypings** Inverse attribute for Class.subtypings from which this was implied.  
( [Class](#) value M\_1 )

INVERSE [Class.subtypings](#)

**Class** A link back to the Class on which this Subtyping depends.  
( [Class](#) value M\_1 )

**subtypings** Inverse attribute for Class.subtypings from which this was implied.  
( [Class](#) value M\_1 )

INVERSE [Class.subtypings](#)

**Class** A link back to the Class on which this Subtyping depends.  
( [Class](#) value M\_1 )

inverse	Inverse attribute for Class.subtypings from which this was implied.	( <a href="#">Class</a> value M_1 )
DEPENDS ON	<a href="#">Class.subtypings</a>	
CLASS	A link back to the Class on which this Subtyping depends.	( <a href="#">Class</a> value M_1 )
ReferenceType	A class that is presumed to be used as a reference, rather than a value	
PLURAL	ReferenceTypes	
DEPENDS ON	ReferenceTypes	
DEPENDS ON	<a href="#">Class</a>	
Type	<b>CodeType</b> A data type or enumeration used in the model	
PLURAL	CodeTypes	
DEPENDS ON	CodeTypes	
DEPENDS ON	<a href="#">CodeValue</a>	
inverse	the code type was implied by use in an attribute and is only used for that attribute	( <a href="#">Boolean</a> value O_0 )
Type	<b>CodeValue</b> A possible value for an enumerated data class	
PLURAL	CodeValues	
DEPENDS ON	CodeValues	
DEPENDS ON	<a href="#">CodeType</a>	
code	A short code or abbreviation for the value	( <a href="#">NameString</a> value O_0 )
note	an explanation of what the code means	( <a href="#">RichText</a> value O_0 )
note	Often, a CodeType will be assigned to just one attribute in the model. In such cases, there's no need to declare a new Code Type and invent a name for it. Instead:	
DEPENDS ON	A link back to the CodeType on which this CodeValue depends.	( <a href="#">CodeType</a> value M_1 )
DEPENDS ON	A link back to the CodeType on which this CodeValue depends.	( <a href="#">CodeType</a> value M_1 )

## Attributes CodeType

A link back to the CodeType on which this CodeValue depends.

( [CodeType](#) value M\_1 )

### Key

a list of attributes of a class

PLURAL Keys

IMMEDIATE PLURAL Keys

BASED ON [Class](#)

BTYPED OF [Component](#)

SUBTYPES [UniqueKey](#)

## Attributes

the attributes of the base Class.

( List of [Attributes](#) value O\_0 )

INVERSE [Attribute.inverseOfKeyAttributes](#)

CONSTRAINTS each attribute must be a direct or inherited of the base class.

CONSTRAINTS no repetitions allowed in keyAttributes

👉 **Issue** : introduce PureLists?

issue need ascending descending to support index keys or ordering keys.

## Attributes Class

A link back to the Class on which this Key depends.

( [Class](#) value M\_1 )

**Class** A link back to the Class on which this Key depends.

( [Class](#) value M\_1 )

**Class** A link back to the Class on which this Key depends.

( [Class](#) value M\_1 )

### UniqueKey

a list of attributes on which instances of the base class may be keyed.

note order unimportant for Unique Keys.

PLURAL UniqueKeys

IMMEDIATE PLURAL UniqueKeys

BTYPED OF [Key](#)

**AttributeSection**

a group of attributes for a class that merit a shared explanation.

**LURAL** AttributeSections

**PLURAL** AttributeSections

**SED ON** [Class](#)

**DENTS** [Attribute](#)

**TYPE OF** [Component](#)

whether the attributes in this section, taken together, are optional.

( [Boolean](#) value **O\_O** )

If the Attribute Section is required, then each Attribute within the section is optional or required, depending on how it is marked.

- 
- But if the Attribute Section is optional each attribute in the section is only required if any attribute in the section is present.

**AttributeSection** **inverse** attribute for [Class.attributeSections](#) from which this was implied.

( [Class](#) value **M\_1** )

**VERSE** [Class.attributeSections](#)

A link back to the Class on which this AttributeSection depends.

( [Class](#) value **M\_1** )

**AttributeSection** **inverse** attribute for [Class.attributeSections](#) from which this was implied.

( [Class](#) value **M\_1** )

**VERSE** [Class.attributeSections](#)

**AttributeSection** **inverse** attribute for [Class.attributeSections](#) from which this was implied.

( [Class](#) value **M\_1** )

**VERSE** [Class.attributeSections](#)

A link back to the Class on which this AttributeSection depends.

( [Class](#) value **M\_1** )

<b>Attribute</b>	A property or characteristic of a class
<b>PLURAL</b>	Attributes
<b>BASED ON</b>	<a href="#">AttributeSection</a>
<b>DEPENDENTS</b>	<a href="#">AttributeConstraint</a>
<b>BTYPED OF</b>	<a href="#">Component</a>
<b>name</b>	( <a href="#">LowerCamel</a> value O_O )
<b>OVERRIDES</b>	<a href="#">Component.name</a>
<b>dataType</b>	The kind of object to which the attribute refers. _ ( <a href="#">DataType</a> value O_O )
	But, <ul style="list-style-type: none"> <li>◦ List of Editions</li> <li>◦ Set of Edition</li> <li>◦ ... and more complicated cases.</li> </ul>
<b>see</b>	<a href="#">the section below on Data Type Specifiers.</a>
<b>optional</b>	Indicates whether the attribute must have a value for every instance of the class _ ( <a href="#">Boolean</a> value O_O )
<b>DEFAULT</b>	*** False
<b>cardinality</b>	The cardinality of the relationship represented by the attribute _ ( <a href="#">CardinalityCode</a> value O_O )
<b>DEFAULT</b>	*** For a singular attribute, the default cardinality is N:1. If the attribute is 1:1, it must be stated explicitly. For a collective attribute, the default is 1:N. If the attribute is N:M, it must be stated explicitly.
<b>Example</b>	
<b>author</b>	( <a href="#">InventedName</a> value O_O )
<b>books</b>	( <a href="#">Optional</a> <a href="#">InventedName</a> value O_O )
<b>note</b>	<a href="#">how this works with optionality</a>
<b>isInherited</b>	( <a href="#">Boolean</a> value O_O )
<b>DERIVATION</b>	true if the data type is a class or a simple collection of members of a class.

class	the class which contains, or would contain the inverse attribute ( Optional <a href="#">Class</a> value O _ O )
validation	from the data type. Null unless attribute is invertible.
attribute	( Optional <a href="#">Attribute</a> value O _ O )
constraint	( Optional <a href="#">Attribute</a> value O _ O )
rule	The rule or formula for calculating the value, if no value is supplied Now running to a second line with the parenthetical on yet a third line ( Optional <a href="#">Derivation</a> value O _ O )
note	even when an Attribute has a default derivation, there's no guarantee that every instance will have an assigned value. Example needed.
derivation	For derived attributes, the rule or formula for calculating the value _ ( Optional <a href="#">Derivation</a> value O _ O )
issue	on insert vs on access?
constraints	Any validation rules specific to this attribute _ ( List of <a href="#">Constraints</a> value O _ O )
note	from Class.constraints

Type	String
LURAL	Strings
DPLURAL	Strings
Type	CamelName

A short string without punctuation or spaces, suitable for names, labels, or identifiers and presented in camel case.

**PLURAL** CamelNames  
**IMMEDPLURAL** CamelNames  
**BTYPEOF** [String](#)  
**SUBTYPES** [UpperCamel](#), [LowerCamel](#)

**String** ( [String](#) value 0\_0 )

**STRAINTS** Must follow the camel case naming convention and not be empty.

**example** "firstName", "orderDate", "customerID"

**elinguNote**

- *CamelName* is presented here, just after its first usage by another class (Component), to provide context and understanding before it is used further in the model.

**Value Type** [UpperCamel](#) a CamelName that begins with a capital letter

**example** \_ "Customer", "ProductCategory", "PaymentMethod"

**WHERE** content begins with an upper case letter.

**PLURAL** UpperCamels

**IMMEDPLURAL** UpperCamels

**BTYPEOF** [CamelName](#)

**Value Type** [LowerCamel](#) a CamelName that begins with a lower case letter

**example** "firstName", "orderTotal", "shippingAddress"

**WHERE** content begins with a lower case letter.

**PLURAL** LowerCamels

**IMMEDPLURAL** LowerCamels

**BTYPEOF** [CamelName](#)

**Value Type** [QualifiedCamel](#) an expression consisting of Camel Names separated by periods

**PLURAL** QualifiedCamels

**IMMEDPLURAL** QualifiedCamels

**BTYPEOF** [String](#)

**STRAINTS**

content consists of CamelNames, separated by periods. Each of the camel names must be Upper Camel except, possibly, the first.

	<b>Component</b> An element or building block of the literate data model
PLURAL	Components
DEFAULT	Components
DEPENDENTS	<a href="#">Annotation</a>
TYPES	<a href="#">LiterateDataModel</a> , <a href="#">Subject</a> , <a href="#">Class</a> , <a href="#">Key</a> , <a href="#">AttributeSection</a> , <a href="#">Attribute</a> , <a href="#">Constraint</a> , <a href="#">Method</a> , <a href="#">ParameterAnInputToAMethod</a>
name	the name of the component, not in camel case ( <a href="#">String</a> value O_O )
warning	This is a warning with emoji
name	The name of the component ( <a href="#">CamelName</a> value O_O )
name	( <a href="#">QualifiedCamel</a> value O_O )
name	a short form of the component's name, used for cross references and improved readability. ( <a href="#">CamelName</a> value O_O )
sample	"LDM" is the short form of "Literate Data Model".
DEFAULT	name - how do you say name in english?
OCL	x.name == y
RAINTS	the abbreviated name should be shorter than the actual name
OCL	len(abbreviatedName) < len(name)
MESSAGE	Why have an abbreviation longer than the name?
VERITY	Warning
note	Does this annotation find it's way to the Constraint? YES! It's fixed!
ner	A brief, one-line definition or description of the component, suitable for use in a descriptive table of contents. _ ( <a href="#">OneLiner</a> value O_O )
on	A more detailed explanation or discussion of the component _ ( <a href="#">RichText</a> value O_O )
	mechanical attributes
ent	Indicates whether this component is an embellishment added during post-parsing processing _ ( <a href="#">Boolean</a> value O_O )
DEFAULT	false
note	

This attribute is set to true for components that are automatically generated or added during the fleshing out, review, or rendering processes, such as implied attributes or suggested model elements. It helps distinguish embellishments from the core model elements defined in the original LDM source.

	<b>AnnotationType</b> a kind of note, or aside, used to call attention to additional information about some Component.
note	Each LDM declares a set of Annotation Types, with defined labels, emojis, and clearly documented purposes. These are <i>recognized</i> or <i>registered</i> Annotation Types.
PLURAL	AnnotationTypes
DEPENDSON	<a href="#">LiterateDataModel</a>
emoji	an emoji ( <a href="#">Emoji</a> value O_O )
name	an emoji ( <a href="#">String</a> value O_O )
unicode	the Unicode for the emoji ( <a href="#">String</a> value O_O )
label	A short label to indicate the purpose of the annotation ( <a href="#">LowerCamel</a> value O_O )
plural	the plural form of the label ( <a href="#">UpperCamel</a> value O_O )
DEFAULT	based on label
reason	the intended reason for the annotation. ( <a href="#">OneLiner</a> value O_O )
depends on	A link back to the LiterateDataModel on which this AnnotationType depends. ( <a href="#">LiterateDataModel</a> value M_1 )

VERSE [Subject.parentSubject](#)

**Subjects** Inverse attribute for Subject.childSubjects from which this was implied.  
( [Subject](#) value M\_1 )

VERSE [Subject.childSubjects](#)

**SubjectArea**

A main topic or area of focus within the model, containing related subjects and classes

WHERE parentSubject is absent

LURAL SubjectAreas

SEDON [LiterateModel](#), [Xyz](#)

TYPEOF [Subject](#)

**s del** A link back to the LiterateModel on which this SubjectArea depends.  
( [LiterateModel](#) value M\_1 )

**s Xyz** A link back to the Xyz on which this SubjectArea depends.  
( [Xyz](#) value M\_1 )

**s del** A link back to the LiterateModel on which this SubjectArea depends.  
( [LiterateModel](#) value M\_1 )

**s Xyz** A link back to the Xyz on which this SubjectArea depends.  
( [Xyz](#) value M\_1 )

## Class

A key entity or object type in the model, often corresponding to a real-world concept

PLURAL	Classes
DEPENDENTS	<a href="#">Subtyping</a> , <a href="#">Key</a> , <a href="#">AttributeSection</a> , <a href="#">ClassConstraint</a>
BTYPOF	<a href="#">Component</a>
SUBTYPES	<a href="#">ReferenceType</a>
STRAINTS	Within each Class, attribute names must be unique.

**Form** the normal English plural form of the name of the Class

( [UpperCamel](#) value O\_O )

Might be Books for the Book class or other regular plurals.

- But also might be People for Person.

**note** When inputting a model, you will rarely need to specify the plural form. The input program will just look it up.

**DEFAULT** the regular plural, formed by adding "s" or "es".

**basedOn** the Class or Classes on which this class is dependent

( [Set of Class](#) value O\_O )

This is solely based on **Existence Dependency**. A true dependent entity cannot logically exist without the related parent entity. For instance, an Order Item cannot exist without an Order. If removing the parent entity logically implies removing the dependent entity, then it is a dependent entity.

**note** that basedOn and dependentOf are being used synonymously in this metamodel.

**INVERSE** [Class.inverseOfBasedOn](#)

**types** The parent class

( [Es](#) value O\_O )

**typings** the criteria, or dimensions, by which the class can be divided into subtypes

( [List of Subtypings](#) value O\_O )

**example** in a library model, the `Book` class could have subtypings based on genre (e.g., Fiction, Non-fiction), format (e.g., Hardcover, Paperback), or subject (e.g., Science, History).

**INVERSE** [Subtyping.inverseOfSubtypings](#)

**types** Any subtypes or specializations of this class based on its subtypings.

( [List of Classes](#) value O\_O )

example	For instance, using the <code>Book</code> example, the subtypes could include <code>FictionBook</code> , <code>Non-fictionBook</code> , <code>HardcoverBook</code> , <code>PaperbackBook</code> , <code>ScienceBook</code> , and <code>HistoryBook</code> .

## Preliminaries

the basic structure of the model

In Literate Data Modeling, the main components of interest are typically Classes, Attributes, Models, and Subjects. However, to streamline the model and promote reusability, we introduce a supertype called Component. By defining common attributes and behaviors in the Component class, we can inherit them in the subclasses, ensuring consistency and reducing duplication throughout the model.

We present the Component class first because it is a best practice in modeling to introduce supertypes before their subtypes. This approach allows readers to understand the general concepts and shared properties before delving into the specifics of each specialized component.

Preliminaries

<b>Component</b>
An element or building block of the literate data model

**PLURAL** Components

**IMPLURAL** Components

**DEPENDENTS** [Annotation](#)

**SUBTYPES** [LiterateDataModel](#), [Subject](#), [Class](#), [Key](#), [AttributeSection](#), [Attribute](#), [Constraint](#), [Method](#), [ParameterAnInputToAMethod](#)

<b>Name</b>	the name of the component, not in camel case
	( <a href="#">String</a> value O_O )

**warning** This is a warning with emoji

<b>name</b>	The name of the component
	( <a href="#">CamelName</a> value O_O )

<b>Name</b>	( <a href="#">QualifiedCamel</a> value O_O )
-------------	--

<b>Name</b>	a short form of the component's name, used for cross references and improved readability.
	( <a href="#">CamelName</a> value O_O )

**example** "LDM" is the short form of "Literate Data Model".

**DEFAULT** name - how do you say name in english?

OCL x.name == y

**CONSTRAINTS** the abbreviated name should be shorter than the actual name

OCL len(abbreviatedName) < len(name)

**MESSAGE** Why have an abbreviation longer than the name?

**SEVERITY** Warning

**note** Does this annotation find it's way to the Constraint? YES! It's fixed!

<b>OneLiner</b>	A brief, one-line definition or description of the component, suitable for use in a descriptive table of contents. _
	( <a href="#">OneLiner</a> value O_O )

<b>ration</b>	A more detailed explanation or discussion of the component _
	( <a href="#">RichText</a> value O_O )

<b>/</b>	mechanical attributes
----------	-----------------------

<b>ment</b>	Indicates whether this component is an embellishment added during post-parsing processing _
	( <a href="#">Boolean</a> value O_O )

**DEFAULT** false

**note**

This attribute is set to true for components that are automatically generated or added during the fleshing out, review, or rendering processes, such as implied attributes or suggested model elements. It helps distinguish embellishments from the core model elements defined in the original LDM source.

**AnnotationType**

a kind of note, or aside, used to call attention to additional information about some Component.

**note** Each LDM declares a set of Annotation Types, with defined labels, emojis, and clearly documented purposes. These are *recognized or registered* Annotation Types.

**PLURAL** AnnotationTypes

**IMPLIES** AnnotationTypes

**BASED ON** [LiterateDataModel](#)

**emoji** an emoji  
( [Emoji](#) value O\_O )

**Name** an emoji  
( [String](#) value O\_O )

**unicode** the Unicode for the emoji  
( [String](#) value O\_O )

**label** A short label to indicate the purpose of the annotation \_  
( [LowerCamel](#) value O\_O )

**plural** the plural form of the label  
( [UpperCamel](#) value O\_O )

**DEFAULT** based on label

**purpose** the intended reason for the annotation.  
( [OneLiner](#) value O\_O )

**implies**  
**LiterateDataModel** A link back to the LiterateDataModel on which this AnnotationType depends.  
( [LiterateDataModel](#) value M\_1 )

**implies**  
**AnnotationType** inverse attribute for Annotation.annotationType from which this was implied.  
( [Annotation](#) value M\_1 )

**INVERSE** [Annotation.annotationType](#)

**implies**  
**LiterateDataModel** A link back to the LiterateDataModel on which this AnnotationType depends.  
( [LiterateDataModel](#) value M\_1 )

**implies**  
**AnnotationType** inverse attribute for Annotation.annotationType from which this was implied.  
( [Annotation](#) value M\_1 )

VERSE [Annotation.annotationType](#)

**Annotation**

A note or comment associated with a model element

LURAL Annotations

PLURAL Annotations

SEDON [Component](#)

pe ( *Optional* [AnnotationType](#) value O\_O )

note An Annotation is considered to *recognized* if the label is associated with an Annotation Type. otherwise it is *ad hoc* .

note Should be a Value Type

VERSE [AnnotationType.inverseOfAnnotationType](#)

bel A short label to indicate the purpose of the annotation \_  
( [CamelName](#) value O\_O )

But any short label is valid.

DEFAULT from annotationType

oji ( *Optional* [Emoji](#) value O\_O )

DEFAULT from annotation type

ent The content or body of the annotation  
( [RichText](#) value O\_O )

ent Indicates whether this annotation is an embellishment added during post-parsing processing \_  
( [Boolean](#) value O\_O )

DEFAULT false

note This attribute is set to true for annotations that are automatically generated or added during the fleshing out, review, or rendering processes, such as suggestions, issues, or diagnostic messages. It helps distinguish embellishment annotations from the annotations defined in the original LDM source.

s ent A link back to the Component on which this Annotation depends.  
( [Component](#) value M\_1 )

ent A link back to the Component on which this Annotation depends.  
( [Component](#) value M\_1 )

# The Model and its Subjects

## Class

A key entity or object type in the model, often corresponding to a real-world concept

PLURAL	Classes
DEPENDENTS	<a href="#">Subtyping</a> , <a href="#">Key</a> , <a href="#">AttributeSection</a> , <a href="#">ClassConstraint</a>
BTYEOF	<a href="#">Component</a>
SUBTYPES	<a href="#">ReferenceType</a>
STRAINTS	Within each Class, attribute names must be unique.

**Form** the normal English plural form of the name of the Class

( [UpperCamel](#) value O\_O )

Might be Books for the Book class or other regular plurals.

- But also might be People for Person.

**note** When inputting a model, you will rarely need to specify the plural form. The input program will just look it up.

**DEFAULT** the regular plural, formed by adding "s" or "es".

**basedOn** the Class or Classes on which this class is dependent

( [Set of](#) [Class](#) value O\_O )

This is solely based on **Existence Dependency**. A true dependent entity cannot logically exist without the related parent entity. For instance, an Order Item cannot exist without an Order. If removing the parent entity logically implies removing the dependent entity, then it is a dependent entity.

**note** that basedOn and dependentOf are being used synonymously in this metamodel.

**INVERSE** [Class.inverseOfBasedOn](#)

**types** The parent class

( [Es](#) value O\_O )

**typings** the criteria, or dimensions, by which the class can be divided into subtypes

( [List of](#) [Subtypings](#) value O\_O )

**example** in a library model, the `Book` class could have subtypings based on genre (e.g., Fiction, Non-fiction), format (e.g., Hardcover, Paperback), or subject (e.g., Science, History).

**INVERSE** [Subtyping.inverseOfSubtypings](#)

**types** Any subtypes or specializations of this class based on its subtypings.

( [List of](#) [Classes](#) value O\_O )

example	For instance, using the <code>Book</code> example, the subtypes could include <code>FictionBook</code> , <code>Non-fictionBook</code> , <code>HardcoverBook</code> , <code>PaperbackBook</code> , <code>ScienceBook</code> , and <code>HistoryBook</code> .

<b>classes</b>	Inverse attribute for Subtyping.classes from which this was implied. ( <u>Subtyping</u> value M_1 )
INVERSE	<a href="#">Subtyping.classes</a>
<b>coreClass</b>	Inverse attribute for SimpleDataTypeSubtpeOfDataType.coreClass from which this was implied. ( <u>SimpleDataTypeSubtpeOfDataType</u> value M_1 )
INVERSE	<a href="#">SimpleDataTypeSubtpeOfDataType.coreClass</a>

**Subtyping**  
a way in which subtypes of a Class may be classified

**LURAL** Subtypings  
**ADPLURAL**Subtypings  
**SEDON** [Class](#)

**me** ( [LowerCamel](#) value O\_O )

**ive** ( [Boolean](#) value O\_O )

**DEFAULT** true

**ive** ( [Boolean](#) value O\_O )

**DEFAULT** true

**es** ( List of [Classes](#) value O\_O )

**DSL** : Shown in the DSL as

- Subtypes: byBrand - Brand1, Brand2,... (non exclusive, exhaustive)
- on the super class. And as
  - Subtype of: SuperClass byBrand
- on the subclass.

**note** every class can have an unnamed subtyping.  
**VERSE** [Class.inverseOfClasses](#)

**s**  
**ings**  
Inverse attribute for Class.subtypings from which this was implied.  
( [Class](#) value M\_1 )

**VERSE** [Class.subtypings](#)

**ss**  
A link back to the Class on which this Subtyping depends.  
( [Class](#) value M\_1 )

**ings**  
Inverse attribute for Class.subtypings from which this was implied.  
( [Class](#) value M\_1 )

**VERSE** [Class.subtypings](#)

**ss**  
A link back to the Class on which this Subtyping depends.  
( [Class](#) value M\_1 )

Classes

<b>subtypings</b>	Inverse attribute for Class.subtypings from which this was implied. ( <a href="#">Class</a> value M_1 )
<b>INVERSE</b>	<a href="#">Class.subtypings</a>
<b>Class</b>	A link back to the Class on which this Subtyping depends. ( <a href="#">Class</a> value M_1 )
	<b>ReferenceType</b> A class that is presumed to be used as a reference, rather than a value
<b>PLURAL</b>	ReferenceTypes
<b>IMMEDPLURAL</b>	ReferenceTypes
<b>BTYPOF</b>	<a href="#">Class</a>
<b>Value Type</b>	<b>CodeType</b> A data type or enumeration used in the model
<b>PLURAL</b>	CodeTypes
<b>IMMEDPLURAL</b>	CodeTypes
<b>DEPENDENTS</b>	<a href="#">CodeValue</a>
<b>Implied</b>	the code type was implied by use in an attribute and is only used for that attribute ( <a href="#">Boolean</a> value O_O )
<b>Value Type</b>	<b>CodeValue</b> A possible value for an enumerated data class
<b>PLURAL</b>	CodeValues
<b>IMMEDPLURAL</b>	CodeValues
<b>BASEDON</b>	<a href="#">CodeType</a>
<b>code</b>	A short code or abbreviation for the value _ ( <a href="#">NameString</a> value O_O )
<b>Description</b>	an explanation of what the code means ( <a href="#">RichText</a> value O_O )
<b>note</b>	Often, a CodeType will be assigned to just one attribute in the model. In such cases, there's no need to declare a new Code Type and invent a name for it. Instead:
<b>CodeType</b>	A link back to the CodeType on which this CodeValue depends. ( <a href="#">CodeType</a> value M_1 )
<b>CodeType</b>	A link back to the CodeType on which this CodeValue depends.

	( <a href="#">CodeType</a> value M_1 )
	A link back to the CodeType on which this CodeValue depends.
	( <a href="#">CodeType</a> value M_1 )
	<b>Key</b>
	a list of attributes of a class
LURAL	Keys
EDPLURAL	Keys

	( List of <a href="#">Attributes</a> value O_O )
VERSE	<a href="#">Attribute.inverseOfKeyAttributes</a>
RAINTS	each attribute must be a direct or inherited of the base class.
RAINTS	no repetitions allowed in keyAttributes
	👉 <b>Issue</b> : introduce PureLists?
issue	need ascending descending to support index keys or ordering keys.
	A link back to the Class on which this Key depends.
	( <a href="#">Class</a> value M_1 )
	A link back to the Class on which this Key depends.
	( <a href="#">Class</a> value M_1 )
	A link back to the Class on which this Key depends.
	( <a href="#">Class</a> value M_1 )
	<b>UniqueKey</b>
	a list of attributes on which instances of the base class may be keyed.
note	order unimportant for Unique Keys.
LURAL	UniqueKeys
EDPLURAL	UniqueKeys
TYPEOF	<a href="#">Key</a>

## Attributes

**AttributeSection**

a group of attributes for a class that merit a shared explanation.

LURAL AttributeSections  
DPLURAL AttributeSections  
SEDON [Class](#)  
DENTS [Attribute](#)  
YPOF [Component](#)

whether the attributes in this section, taken together, are optional.

( [Boolean](#) value O\_O )

If the Attribute Section is required, then each Attribute within the sectional is optional or required, depending on how it is marked.

- But if the Attribute Section is optional each attribute in the section is only required if any attribute in the section is present.

AttributeSections reverse attribute for Class.attributeSections from which this was implied.

( [Class](#) value M\_1 )

VERSE [Class.attributeSections](#)

( [Class](#) value M\_1 )

## Attributes

### Attribute

A property or characteristic of a class

**PLURAL**    Attributes  
**BASED ON**    [AttributeSection](#)  
**DEPENDENTS**    [AttributeConstraint](#)  
**BTYPED OF**    [Component](#)

**name**    ( [LowerCamel](#) value O\_O )

**OVERRIDES**    [Component.name](#)

**dataType**    The kind of object to which the attribute refers. \_  
( [DataType](#) value O\_O )

But,

- ◦ List of Editions
- ◦ Set of Edition
- ◦ ... and more complicated cases.

see    [the section below on Data Type Specifiers.](#)

**optional**    Indicates whether the attribute must have a value for every instance of the class \_  
( [Boolean](#) value O\_O )

**DEFAULT**    \*\*\* False

**cardinality**    The cardinality of the relationship represented by the attribute \_  
( [CardinalityCode](#) value O\_O )

**DEFAULT**    \*\*\* For a singular attribute, the default cardinality is N:1. If the attribute is 1:1, it must be stated explicitly. For a collective attribute, the default is 1:N. If the attribute is N:M, it must be stated explicitly.

**Example**

**author**    ( [InventedName](#) value O\_O )

**books**    ( [Optional](#) [InventedName](#) value O\_O )

**note**    [how this works with optionality](#)

**isInherited**    ( [Boolean](#) value O\_O )

**DERIVATION**    true if the data type is a class or a simple collection of members of a class.

class	the class which contains, or would contain the inverse attribute ( Optional <a href="#">Class</a> value O_0 )
validation	from the data type. Null unless attribute is invertible.
attribute	( Optional <a href="#">Attribute</a> value O_0 )
constraint	( Optional <a href="#">Attribute</a> value O_0 )
rule	The rule or formula for calculating the value, if no value is supplied Now running to a second line with the parenthetical on yet a third line ( Optional <a href="#">Derivation</a> value O_0 )
note	even when an Attribute has a default derivation, there's no guarantee that every instance will have an assigned value. Example needed.
derivation	For derived attributes, the rule or formula for calculating the value __ ( Optional <a href="#">Derivation</a> value O_0 )
issue	on insert vs on access?
constraints	Any validation rules specific to this attribute __ ( List of <a href="#">Constraints</a> value O_0 )
note	from Class.constraints
inverse
